

Andrew	Ting	Ating@wenhamma.gov	Wenham	Board of Health Member	Highly interested	We were the first MA town to ban flavored nicotine delivery products (as a small town, it might have helped us to fly under the radar of outside stakeholders for that particular initiative). We have small communities, some with no tobacco sales. We do have 1 of our communities planning to pass a NFG version of tobacco regulations. We have heard a presentation on this and would like to follow up. We had a presentation from a representative from NFG during our Board of Health Meeting yesterday evening and it was very informative and enlightening. Any tips you have to help us with public support and messaging the general public to combat misinformation provided by lobbying groups for Big Tobacco is very useful. Thanks :) I would like to see more clarity to the current MA State Law surrounding the sale of tobacco products, especially regarding coupons vs promotions. It seems the law allows for various interpretations. In this digital age, the law needs some updating. We are in the process of adopting NFG. Once I go, I should be able to pull several other communities with me. The constituents of Norwood thought we were aiming to be an NFG town, and we weren't. It was just discussed at a board of health meeting about other towns being NFG, and people of the town did not like it. They felt that their freedoms were being taken away from them. If you remember, we are the board of health who got death threats this past summer when we asked a mom and her son to call us to discuss selling other goods than homemade ice cream, which she was selling for profit at the time from her front lawn. People called it a cease-and-desist letter, but it wasn't. She then said to the news that it was for a charity. Initially, it was for her son to earn some spending money during the summer. Those death threats came from all over the country and Canada. Therefore, I would tread lightly on adopting new NFG towns in this political climate, especially for this town. I've briefly discussed this with one other board members and while we were hesitant I think it is something our board would be interested in hearing more about. I have concerns with all the pot shops I am highly interested but I think there may be some hesitation from other members of the board.
